

# Multimodal Reading Assignment

We are exploring how audio, force/touch, and robot motion can improve our robotic cellist's control and sound-quality evaluation.

**DUE: TUESDAY, SEPTEMBER 22, 2026**

**Finish and share slides before the meeting.**

Present at Tuesday's meeting.

## Your task

Choose **any 1-2 papers** below. Work **individually or in a team**.

Prepare **one 3-slide deck** and a **2-3-minute presentation** per individual/team. All team members must speak.

## Presentation structure

| SLIDE                  | WHAT TO COVER                                                                            | TIME   |
|------------------------|------------------------------------------------------------------------------------------|--------|
| <b>1. Problem</b>      | What task does the robot perform? Which modalities are used? What does the model output? | 40 sec |
| <b>2. Evidence</b>     | Show one figure or table from a paper. Explain the comparison, metric, and result.       | 60 sec |
| <b>3. Project link</b> | How could the idea help our project? What is uncertain? How could we test it?            | 40 sec |

Cite the paper and figure/table number on your evidence slide.

## Choose 1-2 papers

Click a title to open the paper.

1. [See, Hear, and Feel: Smart Sensory Fusion for Robotic Manipulation](#)
2. [Play it by Ear: Learning Skills amidst Occlusion through Audio-Visual Imitation Learning](#)
3. [FACTR: Force-Attending Curriculum Training for Contact-Rich Policy Learning](#)
4. [ManiWAV: Learning Robot Manipulation from In-the-Wild Audio-Visual Data](#)
5. [Acoustic Feedback for Closed-Loop Force Control in Robotic Grinding](#)
6. [Tactile Beyond Pixels: Multisensory Touch Representations for Robot Manipulation](#)
