

Multimodal Policy Reading Assignment

Review how robot policies use multiple types of sensory information to choose actions.

DUE: TUESDAY, SEPTEMBER 29, 2026

Share slides before the meeting. Present at Tuesday's meeting.

Your task

Choose **any 1-2 papers** below for a short literature review. Work **individually or in a team**.

Prepare **one 3-slide deck** and a **2-3-minute presentation** per individual/team. All team members must speak.

Presentation structure

SLIDE	WHAT TO COVER	TIME
1. Problem	What problem does the paper solve? What are the policy's inputs and outputs?	40 sec
2. Evidence	Show one figure or table. Explain the comparison and main result.	60 sec
3. Project link	What idea could be useful for our robotic cellist?	40 sec

Cite the paper and figure/table number on your evidence slide.

Choose 1-2 papers

Click a title to open the paper. Use its question to guide your review.

1. [Diffusion Policy: Visuomotor Policy Learning via Action Diffusion](#)

Question: How does the policy turn observations into a sequence of actions?

2. [ManiWAV: Learning Robot Manipulation from In-the-Wild Audio-Visual Data](#)

Question: How does audio help the policy choose actions?

3. [FACTR: Force-Attending Curriculum Training for Contact-Rich Policy Learning](#)

Question: How does the training method help the policy use force information?

4. [Reactive Diffusion Policy: Slow-Fast Visual-Tactile Policy Learning for Contact-Rich Manipulation](#)

Question: What do the slow and fast policies each do?

5. [ViTacFormer: Learning Cross-Modal Representation for Visuo-Tactile Dexterous Manipulation](#)

Question: How are vision and touch combined to produce actions?

6. [ForceMimic: Force-Centric Imitation Learning with Force-Motion Capture System for Contact-Rich Manipulation](#)

Question: Why does the policy predict both motion and force?

Upload slides to the **Week 6 folder** in our [shared Google Drive](#) before the meeting.
